

OCHA QuickVid

Install guide for Adobe Premiere Pro

The OCHA branding elements — lower third, location, OCHA logo, ending, on-screen text, readability gradient — dropped straight onto your Premiere timeline, matched to the sequence format. **Install once via the steps below.** From then on the panel updates itself — when a new version is out you'll see “Update now” in a banner at the top of the panel.

macOS

- 1 Quit Premiere Pro (Cmd Q — fully quit).
- 2 Download the free **ZXP/UXP Installer** from aescripts.com/learn/zxp-installer.
- 3 Drag **ocha-quickvid-panel.zxp** onto the installer window.
- 4 Open Premiere Pro → **Window** → **Extensions** → **OCHA QuickVid**.

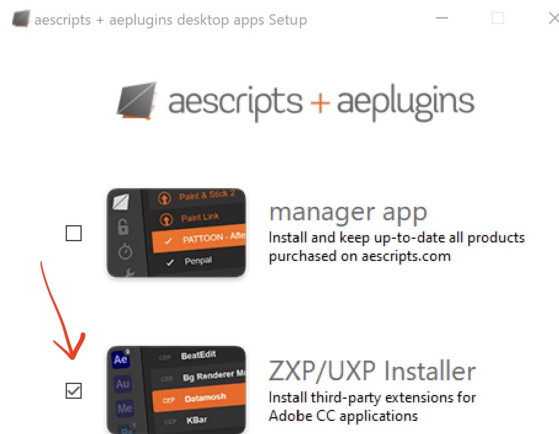

Windows

1. Run windows-setup.bat (one-time)

Double-click **windows-setup.bat** in this folder, click “Yes” when Windows asks, press any key. This tells Premiere to load our self-signed panel. Once per computer.

2. Install ZXP/UXP Installer

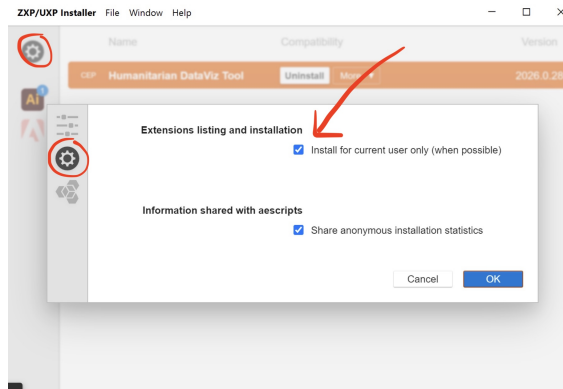

Get it free from aescripts.com/learn/zxp-installer. When the setup wizard asks, install **only the ZXP/UXP Installer** — leave the manager app unchecked:

Uncheck “manager app”, keep “ZXP/UXP Installer” checked.

3. Confirm “Install for current user only”

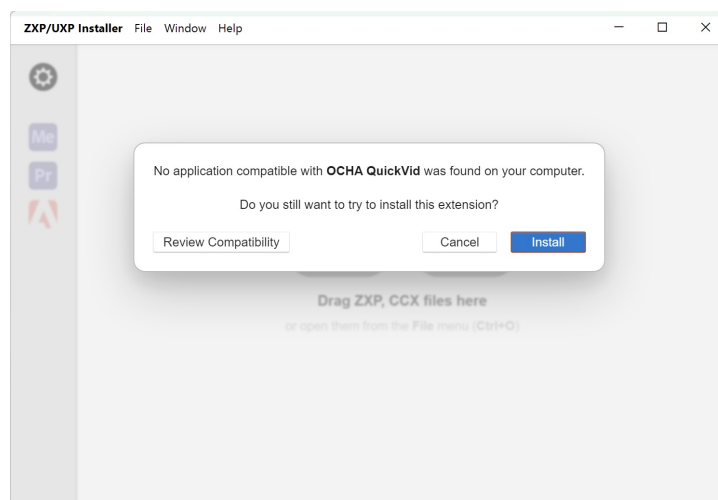

Open the ZXP/UXP Installer, click the **gear icon** top-left, and make sure “**Install for current user only (when possible)**” is **checked**. Click **OK**. (This is what lets the panel update itself later.)

The gear icon and the “Install for current user only” checkbox.

4. Add the ZXP — and ignore the compatibility warning

Drag **ocha-quickvid-panel.zxp** onto the ZXP/UXP Installer window or use **File** → **Open** in the installer's menu and pick the file. The installer may then claim no compatible application was found:

This warning is wrong — ignore it.

The warning is incorrect — OCHA QuickVid works fine with your Premiere Pro. The installer just fails to detect Premiere on some Windows machines. Click **Install** and let it finish.

5. Open the panel

Open Premiere Pro → **Window** → **Extensions** → **OCHA QuickVid**.

Updates

When a new version is out, a banner appears at the top of the panel: “**New version vX.Y.Z — Update now**”. Click it. The new build downloads, then the banner says “**quit Premiere to finish installing**”. Quit Premiere fully, wait a few seconds, reopen — the panel confirms “**Updated to vX.Y.Z ✓**”.

If auto-update doesn't work

Rare, but if the update doesn't land, download the latest **ocha-quickvid-panel.zxp** from this folder and drag it onto the ZXP/UXP Installer again — it overwrites the old version. The menu's update line at the bottom shows what the updater is seeing (click it for details you can send us).

Privacy

The panel sends anonymous usage pings — version, which element was added (e.g. “lower third”), approximate city — to a private OCHA sheet so we can see what gets used. Never any text you type, names, project names, or file paths.
